

Fenugreek

Synthite offers a range of ingredients sourced from fenugreek seeds, these products are widely used as an ingredient in nutritional supplement, functional foods, food hydrocolloids as well as personal care products.

Fenugreek dietary fibre is principally a galactomannan polysaccharide obtained from the fenugreek seeds. It has unique galactose to mannose ratio that differentiates it from other galactomannan gums (Fenugreek- 1:1, Guar-1:2, LBG-1:4). Fenugreek fibre is widely used as dietary supplement for its ability to give feeling of satiety, reducing cholesterol, reducing heart burn and good moisture retention that makes it useful in skin care applications.

Synthite range of products from Fenugreek

Product Name	Specification
Fenugreek Dietary Fibre	≥85% Total Dietary Fibre ,≥75% Soluble Dietary Fibre
